## Kongsberg XE10

### Dieless digital cutting and creasing tables for folding carton packaging

The Kongsberg XE is a small format system with robust construction and performance. It is the ideal solution for high quality sample making and short run production of folding cartons and for the preparation of varnish blankets.

### Specifications

- **Operator safety:** the DynaGuard Safety System protects the operator and bystanders from potential machine hazards. In addition the machine is equipped with an emergency stop button and a warning light, which is lit as long as the servos are powered.
- **Control software:** XE Guide

### Notes

|                                 | XE10                            |
|---------------------------------|---------------------------------|
| Work area                       | 800 x 1100 mm<br>31.5" x 43.3"  |
| Max. sheet size                 | 1000 x 1500 mm<br>39.4" x 59.1" |
| Overall dimensions              | 1580 x 1630 mm<br>62.3" x 64.2" |
| Weight                          | 175 kg - 385 lbs                |
| Max. speed <sup>1</sup>         | 64 m/min - 42 IPS               |
| Max. acceleration <sup>1</sup>  | 12 m/s <sup>2</sup> - 1.2 G     |
| Servo resolution                | < 0.005 mm - < .0002"           |
| Repeatability                   | ± 20 µm - ± .00078"             |
| Max. horizontal cutting force   | 200 N - 45 lbs force            |
| Max. vertical tool force        | 100 N - 25 lbs force            |
| Traverse clearance <sup>2</sup> | 20 mm - .787"                   |

<sup>1</sup> Maximum speed and acceleration measured along the resultant of the X and Y-axis velocity vectors.

<sup>2</sup> Measured without cutting underlay

## Kongsberg VL Series

Tables for one ups and short-run production.

The Kongsberg VL entry level cutting tables offer durability, precision, and versatility.

### Specifications for all VL tables

- **Operator safety:** the DynaGuard Safety System protects the operator and bystanders from potential machine hazards.
- **Tooling range:** The VL table is offered with the FlexiHead. All XN tool inserts that fit the FlexiHead are available, except the FoamKnife.
- **Material registration brackets (optional):** The brackets enable cut, crease and plot operations on both sides of the material. They are positioned at the front and rear right corner of the machine.

## Kongsberg XN Series

### Highly versatile cutting tables for digital finishing

The Kongsberg XN series of digital cutting tables comes in seven different model sizes and can be configured to solve virtually any finishing task related to the packaging, display and sign segments.

### Specifications for all XN tables

- Three Styling Kits available to fit needs for
  - Samplemaking
  - Pack Production
  - Sign Production

A styling kit is a pre-packaged set of user interface, cutting underlay, different cover variants and PC-table or workstation

- **Operator safety:** The DynaGuard Safety System protects the operator and bystanders from potential machine hazards.

### Available options

- **X-Pad** for semi-automatic tool leveling
- **Solutions for registration and compensation:** *i*-cut Vision Pro registers the actual dimensions and positions on the printed result by reading any number of registration marks with a camera. Then, finishing is adapted to the shape of the graphics. For 3D applications the Automatic Registration System (ARS) is available as an alternative, reading up to four printed register marks

- **Optional automation features:** Conveyor system with roll and sheet material loading & unloading equipment. Requires the optional *i*-cut Vision Pro system
- All optional features can be retrofitted.

| Traverse clearance <sup>5</sup>             | Standard clearance 50 mm – 2"                                |                            |                            |                               | Optional high clearance 95 mm – 3 ¾" |                                |                            |           |

<sup>1</sup> Measured with RWS in its standard position

<sup>2</sup> Conveyor feed option will add marginally to the length dimension

<sup>3</sup> Applies across total work area, with standard traverse clearance

<sup>4</sup> May be reduced with certain tool- and configuration combinations.

<sup>5</sup> Measured without cutting underlay. Maximum cutting thickness is tool dependant.

## Kongsberg XP Series

### High Performance cutting tables for digital finishing

The Kongsberg XP series of digital cutting tables handles the combination of corrugated board and other rigid materials used for packaging, displays and signage. These machines are specifically designed to operate continuously at high speed in a 24/7 production environment.

### Specifications for all XP tables

- **Revolving workstation** mounted on the side of the table.  
Includes table operator panel, main switch, emergency power switch and storage space for tooling. Space for controller PC (optional) with a flat-screen monitor, keyboard and mouse.
- **Automatic tool level measurement.**
- **Operator safety:** the DynaGuard Safety System protects the operator and bystanders from potential machine hazards.
- **Optional print registration and compensation:** *i*-cut Vision Pro registers the actual dimensions and positions on the printed result by reading any number of registration marks with a camera. Then, finishing is adapted to the shape of the graphics. For 3D applications the Automatic Registration System (ARS) is available as an alternative, reading up to four printed register marks
- **Optional automation features:** Conveyor system with roll and sheet material loading & unloading equipment. Requires the optional *i*-cut Vision Pro system
- All optional features can be retrofitted.

## Kongsberg XP Auto

### Fully automated and unsupervised production of POP displays and packaging

The Kongsberg XP Auto is a fully automated dieless finishing machine for packaging and point-of-purchase displays. It can automatically load, cut, unload and neatly stack up to 2.3 x 3.3 m large printed sheets of paperboards, foam board and many other materials.

### Specifications for all XP Auto tables

- **Revolving workstation** mounted on the side of the table. Includes table operator panel, main switch, emergency power switch and storage space for tooling. Space for controller PC (optional) with a flat-screen monitor, keyboard and mouse.
- **Automatic tool level measurement**
- **Optional print registration system:** The Automatic Registration System (ARS) can read up to 4 printed register marks from above as well as from underneath the sheet (during loading).
- **Operator safety:** the DynaGuard Safety System protects the operator and bystanders from potential machine hazards.

## Kongsberg C Series

**Multifunction super-wide digital finisher for signage, display and packaging applications**

The Kongsberg C stands for:

- **Capability:** the widest variety of materials with an extensive range of applications.
- **Capacity:** highest throughput of any super-wide digital finisher
- **Consistency:** same performance every time, for every material, for every job

### Specifications for all C tables

- **Table control workstation** that can be mounted on either side in several different positions to adapt to customer requirements. monitor, keyboard, mouse and table operation panel including joystick for jog operations.
- **Material registration system:** Removable material positioning brackets included. They also work when the machine is equipped with conveyor feed. The machine is delivered with *i*-cut Vision Pro, including camera vision control for printed material.
- **Operator safety:** the DynaGuard Safety System protects the operator and bystanders from potential machine hazards. In addition the machine is equipped with an emergency stop button and a warning light, which is lit as long as the servos are powered.

## Kongsberg *i*-XE10

### High-speed precision digital cutting for signs, displays & labels

The Kongsberg *i*-XE table processes rigid and flexible display materials. It is an efficient and versatile finishing solution for short-run production of labels, signs and displays, visual communication items or various digital print items.

### Specifications

- **Revolving workstation** mounted on the side of the table.  
Includes table operator panel, main switch, emergency power switch and storage space for tooling. Space for controller PC (optional) with a flat-screen monitor, keyboard and mouse.
- **Print registration and compensation:** *i*-cut Vision Pro registers the actual dimensions and positions on the printed result. Then, finishing is adapted to the shape of the graphics.
- **Operator safety:** the DynaGuard Safety System protects the operator and bystanders from potential machine hazards.
- Optional automation features (field upgradeable)
  - **Conveyer system** with a conveyer belt around the table
  - **Conveyer extension** with a conveyer belt around the cutting and extension table, adding passive area to provide safe space for handling finished items. Extension lengths: 1100 mm - 43"
  - Roll feeder or material holder
  - Sheet material loading and unloading equipment

|   | <b><i>i</i>-XE10</b>                    |

| Repeatability                               | ± 20 µm - ± .00078"                     |
| Max. horizontal cutting force any direction | 18.4 kg force – 180 N<br>40.5 lbs force |
| Max. vertical tool force                    | 12 kg force - 120 N - 26.5 lbs force    |
| Traverse clearance <sup>2</sup>             | 20 mm - .787"                           |

<sup>1</sup> Measured along the resultant of the X and Y-axis -velocity vectors.

<sup>2</sup> Measured without hard-pressed felt cutting underlay.

## Kongsberg *i*-XE10 Auto

### Automated short-run production on a big range of materials

It handles materials from thin coated and uncoated papers, folding carton, over pressure sensitive vinyl to thin polycarbonate and much more.

### Specifications

- **Revolving workstation** mounted on the side of the table. Includes table operator panel, main switch, emergency power switch and storage space for tooling. Space for controller PC (optional) with a flat-screen monitor, keyboard and mouse.
- **Print registration and compensation:** *i*-cut Vision Pro registers the actual dimensions and positions on the printed result. Then, finishing is adapted to the shape of the graphics.
- **Operator safety:** the DynaGuard Safety System protects the operator and bystanders from potential machine hazards.
- **Automated material handling:** High-speed feeder for automatic loading of printed materials onto the cutting bed. Conveyor system for material transportation from feeding to cutting to stacking. High-speed stacker for automatic unloading after cutting.
- **Optional automation features:** Roll feeder

## XE tool units

The Kongsberg XE features an tooling system with a variety of tool units, designed for lightning-fast motion combined with superb accuracy to increase finishing productivity and quality for a wide range of materials.

The XE tooling system offers two configurable tool positions with quick connectors prepared for a range of advanced tool units and a fixed tool position for a standard multifunction unit.

- PressCut tool
- VariCut tool
- Static knife tool
- HiForce knife tool
- Crease tool
- VibraCut tool
- HiFrequency VibraCut tool
- RotaCut tool

More information on the tools and materials they can cut can be found in the Kongsberg XE material and tooling guide.

## XN tool heads

### FlexiHead

The FlexiHead is widely **used for folding carton and corrugated board**. It combines highly accurate cutting with power and robustness even for the most complex and compact materials.

Like all other XN tool heads the FlexiHead is mounted on a servo controlled Z-axis plane that moves the entire head up and down to precisely control cutting and creasing depth.

The three configurable tool stations accommodate the full range of standard XN tool inserts. The center toolstation has a spring loaded material foot that serves two purposes:

- It provides hold-down of the material and prevents the knife blade from pulling up pieces of material when extracted
- The foot has an integral sensor that allows exact measurement of the material thickness.

### PowerHead

This tool head comes with two regular tool positions, which means that all standard XN tool inserts can be used.

In addition the PowerHead features a heavy-duty position that can take a large-size crease wheel (diameter 150 mm [6"]). This crease wheel has the equivalent of 50 kg [110lb.] of down-pressure, or 2½ times more force than the conventional tool stations. The combination of additional down-force and the

large frontal area of the big wheel offers excellent crease quality in **heavy-duty corrugated board** and enables creasing **boards with high recycle content** without breaking the liner.

The PowerHead can be expanded to V-notch cutting by exchanging the crease wheel with a knife adapter. V-notch cutting offers mitred corners and highly exact folds for specialty products, such as loading pallets and cushioning elements for shipping containers, as well as special-purpose displays.

## MultiCUT

The MultiCUT comes with two conventional tool stations configurable with all the standard XN tool inserts, in addition to a high speed milling spindle capable of handling a wide range of rigid materials. The MultiCUT is unique because with one single tool head the customer can process materials **from corrugated and folding carton to glasshard sheets of thick Plexi-glass**.

- features air-cooling for the milling bit. A thin jet of air is continuously blowing at the bit and this cooling is important for the edge quality when milling acrylic and other synthetic materials at high speed.
- milling bit exchange is very fast and elegant thanks to a switch that opens / closes the collet holding the bit, eliminating all needs for hand tools.
- the MultiCUT can be fitted or retrofitted to all existing XN-tables.

## MultiCUT-HP (High Power)

The MultiCUT-HP offers the same functionality as the standard MultiCUT but comes with a water-cooled 3 kW milling spindle enabling up to three times higher milling speeds. In addition the spindle is significantly more robust and is a great choice for customers who work extensively with heavy duty materials such as thick sheets of acrylic, wood/MDF and aluminum composite material.

## FoamHead

The FoamHead utilizes a reciprocating knife for handling **foam materials** with a maximum thickness of 86 mm [3 3/8"]. Using blades with serrated (wavy) edge the FoamHead is also utilized for **honeycomb paperboard**. To produce output with maximum cutting accuracy three different blade lengths may be used. Each blade length needs a specific adapter, which is included with the FoamHead.

FoamHead is capable of:

- partial throughcut thanks to the Z-axis control of the XL tables which is very important with many foam designs.
- typical cutting speed in various foam materials from 3 to 10 m/ min.

More information on the tools and materials they can cut can be found in the Kongsberg XN /XL material and tooling guide.

## XP / C Series tooling system

The XP / C Series tooling system consists of a wide variety of optional tool units. These can be quickly mounted in the tool position accommodated for the tool and prepared to cut and finish a specific job, assuring exceptional quality and prompt delivery. Three tool positions are available, enabling usage of three tools within the same job.

**Tool position 1** is for heavy tools optimised for power, like the Heavy-Duty Tool Unit for V-notching and creasing with a power of 50 kg – 110 lbs, 1 kW or 3 kW Milling Units for a wide range of rigid materials and the Foam Cutting Unit for thickness up to 50 mm - 2".

**Position 2** is for a set of static and reciprocating knife tools optimized for fast movements.

There is also an optional **third tool position** that accommodates inserts for either pen plotting or drilling of holes. In addition, the tooling system includes laser pointer for indexing, a material thickness probe and an optional camera for registering to printed images.

More information on the tools and materials they can cut can be found in the Kongsberg XP material and tooling guide.
