

DuPont™ Cyrel® 1000 P

State-of-the-Art Processor

<u>DuPont Packaging Graphics</u> continues to be a global technology leader in the development and supply of flexographic printing systems. Our R&D team continues to develop innovative new solutions to help our customers expand their business by taking advantage of new and profitable opportunities in the growing flexographic packaging market. The DuPont Packaging Graphics portfolio of products includes DuPont[™] Cyrel[®] brand photopolymer plates (<u>analogue</u> and <u>digital</u>), Cyrel[®] platemaking equipment, <u>Cyrel[®] round sleeves</u>, <u>Cyrel[®] plate mounting systems</u> and the revolutionary <u>Cyrel[®] FAST thermal system</u>.

DuPont™ Cyrel® Systems: Higher quality at high speed.

The DuPont[®] Cyrel[®] 1000 P is designed with customer needs in mind; it is easy to install, support, maintain and operate. It is robust, extremely cost effective and reliable.

DuPont™ Cyrel® 1000 P

DuPont™ Cyrel® 1000 P

Benefits

- Maximum plate size 900 x 1,200 mm (36" x 48")
- Innovative washout concept
- High dot resolution and fine line definition
- Integrated viscosimeter
- Robust and easy to support
- Optimum productivity

Floor Plan

Product Features

DuPont™ Cyrel® 1000 P is capable of processing high quality photopolymer plates up to a format of 900 x 1,200 mm (36" x 48"). The unit is easy to support and maintain, simple to operate, and extremely reliable robust and cheap to run.

High dot resolution, excellent line definition, deep reverses and clean floor are achieved to meet the highest Flexo standard irrespective of whether thick, thin, narrow or large plates are being processed.

An innovative washout concept consisting of six flat brushes transverse to each other, and contra-rotating round brushes wash out the non-polymerised parts of the plate. Cleaning takes place through contra-rotating round brushes moistened with fresh solvent, clearing the plate of washout solution.

At the exit section, the plate is pulled over a rotating plush surface and pre-dried. At the same time the relief side can air dry.

The solvent temperature is programmable between 20°C to 40°C (68°F to 104°F) to handle different brands of solvents available to the industry. The speed at which the plates pass through can be preset to adapt to the individual plate types. The integration of fresh solvent is controlled via a viscosimeter, which is constantly monitoring the solvent saturation during the entire process. The unit is operated and controlled through a large colour touch screen panel. The computer control board may store up to 21 different washout plate programs.
